## Care instructions

Labelling for treatment  
and cleaning of textiles

## Care instructions

The symbols indicate the maximum permissible treatment.  
Several articles with different characteristics (material mixture or combination) should always be cleaned with the lowest treatment level.  
Observe detergent instructions, dosage and machine information.

All care symbols are divided into the following five groups:

- Washing
- Bleaching
- Drying
- Ironing
- Professional textile care

# Washing

Information on washability and maximum temperatures.

Gentle washing, if possible with reduced washing quantity and low speed.

Special wash cycle only as mild treatment due to reduced mechanics (e.g. wool washing).

WNO  
Do not wash

W30  
Standard wash cycle  
up to 30°C

W30S  
Gentle wash  
up to 30°C

W30SS  
Special wash cycle  
up to 30°C

WH  
Hand wash  
max. 40°C

W40  
Standard wash cycle  
up to 40°C

W40S  
Gentle wash  
up to 40°C

W40SS  
Special wash cycle  
up to 40°C

W60  
Standard wash cycle  
up to 60°C

W60S  
Gentle wash  
up to 60°C

W90  
Standard wash cycle  
up to 90°C

# Bleaching

Process to improve (before, during and after washing) the removal of dirt and stains and to increase the degree of whiteness.

Bleaching agents are active chlorine or chlorine-free active oxygens.

Mostly found in full/universal detergents.

CNO  
Do not bleach

C  
All types of bleach

CS  
Oxygen bleach  
(no chlorine)

# Drying

Differentiation between natural drying and drying in the dryer.

Simple drying can be applied, but should preferably not be done in a household device (heat damage, shrinkage, creasing, felting).

TNO  
Not suitable for  
dryers

T  
Natural drying  
recommended

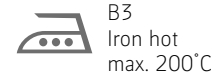

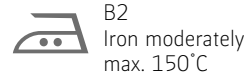

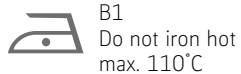

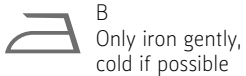

T1  
Gentle drying  
up to max. 60°C

T2  
Normal drying  
up to max. 80°C

# Ironing

Points can vary depending on the iron (regulator, steam, travel irons and ironing machines). Maximum temperature may be lower due to more sensitive raw material compositions. Beware of applications and embossing effects.

# Professional textile care

Differentiation between dry cleaning and wet cleaning.  
The letters provide information on usable solvents. The bar indicates a reduction in moisture, drying or mechanical stress.

 RNO  
No dry cleaning,  
no solvents

 RP  
Normal dry cleaning  
(perchloroethylene)

 RF  
Normal dry cleaning  
(hydrocarbon)

 RA  
Normal dry cleaning  
(everything)

 RPS  
Gentle dry cleaning  
(perchloroethylene)

 RFS  
Gentle dry cleaning  
(hydrocarbon)

 RAS  
Gentle dry cleaning  
(everything)
